

Foundations of Design

What is User Interface (UI)?

User Interface (UI) is the point of human-computer interaction in a device. It includes display screens, keyboards, a mouse, and the appearance of a desktop. It is also the way through which a user interacts with an application or website.

Types of User Interfaces

Common types of user interfaces include graphical user interface (GUI), command line interface (CLI), menu-driven user interface, touch user interface, voice user interface (VUI), form-based user interface, and natural language user interface.

Examples

Examples of user interfaces include computer mice, remote controls, virtual reality systems, ATMs, speedometers, websites, and mobile applications. A good interface helps users interact with a system clearly and efficiently.

Key Idea

UI focuses on how a digital product looks and how users interact with its visible controls. Clear layout, understandable controls, and easy navigation are important parts of a useful interface.
